Understanding the Gartner Hype Cycle and Its Importance in 2023

At its core, the Gartner Hype Cycle is a graphical representation designed to show the maturity, adoption, and social application of specific technologies over time. It's broken down into five key phases:

1. ****Innovation Trigger**** – A breakthrough or new concept generates early interest.
2. ****Peak of Inflated Expectations**** – Buzz and hype build up, often leading to unrealistic expectations.
3. ****Trough of Disillusionment**** – Interest wanes as technologies fail to meet inflated promises.
4. ****Slope of Enlightenment**** – Practical understanding and second-generation products emerge.
5. ****Plateau of Productivity**** – The technology becomes widely adopted and delivers tangible benefits.

In 2023, this cycle is more relevant than ever because the pace of technological innovation is accelerating, and businesses need a clear lens to decide where to invest and what to watch.

Key Emerging Technologies on the Gartner Hype Cycle 2023

The 2023 hype cycle showcases a variety of technologies spanning artificial intelligence, digital transformation, cybersecurity, and sustainability. Here are some of the standout innovations catching significant attention:

1. Generative AI and Foundation Models

Generative AI, including large language models (LLMs) and foundation models, has skyrocketed in visibility. These technologies are moving past the “Peak of Inflated Expectations” and into the “Slope of Enlightenment.” With applications ranging from content creation to drug discovery, generative AI is reshaping how organizations approach automation and creativity.

What makes these models particularly transformative is their ability to learn from vast datasets and generate human-like responses or solutions. Companies investing in generative AI now are likely to lead in innovation and customer engagement in the coming years.

2. Quantum Computing

Quantum computing remains a fascinating but still emerging field. According to the Gartner Hype Cycle 2023 emerging technologies report, quantum computing is positioned in the “Innovation Trigger” phase. While practical, large-scale quantum computers are not mainstream yet, the potential impact on cryptography, materials science, and complex optimization problems is enormous.

Organizations exploring quantum computing early can prepare for disruptive breakthroughs, especially in sectors like finance and pharmaceuticals.

3. Digital Twins and Metaverse Technologies

Digital twins — virtual replicas of physical assets — are gaining traction, especially with the rise of the metaverse. These technologies are moving through the “Trough of Disillusionment” but are expected to reach the “Plateau of Productivity” within a few years. Their ability to simulate real-world environments in real-time offers huge advantages in manufacturing, urban planning, and entertainment.

The metaverse itself, a digital universe where users interact in immersive environments, continues to evolve. Businesses leveraging these technologies for customer experience and remote collaboration are already seeing promising results.

4. Cybersecurity Mesh

In the realm of cybersecurity, the concept of a cybersecurity mesh is gaining momentum. Positioned on the “Slope of Enlightenment,” cybersecurity mesh architecture is an approach that allows distributed and modular security components to work together, enhancing overall protection.

With increasing cyber threats and more complex IT environments, this approach helps organizations build flexible, scalable, and adaptive defenses.

How to Leverage the Gartner Hype Cycle 2023 Emerging Technologies for Your Business

Understanding where a technology stands on the hype cycle can guide investment and strategy. Here's how businesses can make the most of these insights:

Assess Readiness and Risk

Not all emerging technologies are ready for immediate adoption. By identifying whether a technology is in the early hype stages or approaching maturity, companies can balance risk and reward. For example, investing heavily in quantum computing today might be premature for most, but exploring pilot projects or partnerships can build valuable expertise.

Focus on Use Case Alignment

The hype cycle should not be the sole factor driving technology adoption decisions. It's crucial to align emerging technologies with specific business needs and challenges. For instance, generative AI can be a game-changer for content-heavy industries, but its benefits might be less immediate in highly regulated sectors.

Plan for Long-Term Integration

Technologies on the "Slope of Enlightenment" or approaching the "Plateau of Productivity" suggest that practical applications and vendor ecosystems are maturing. Businesses can start integrating these technologies into their workflows and products to gain competitive advantages.

Trends Driving the 2023 Technology Landscape

The Gartner Hype Cycle 2023 emerging technologies also reflect broader trends that are shaping innovation today:

- **AI Everywhere:** Artificial intelligence continues to permeate every sector, from customer service chatbots to predictive analytics and autonomous systems.
- **Sustainability Tech:** Technologies that promote environmental responsibility, such as green computing and carbon accounting tools, are gaining traction as companies face pressure to meet ESG goals.
- **Decentralization and Edge Computing:** To address latency and data privacy, edge computing and decentralized networks are becoming more mainstream.

Key Highlights from the Gartner Hype Cycle 2023 Emerging Technologies

Among the most significant trends, Gartner identifies technologies related to artificial intelligence (AI), digital twins, quantum computing, and extended reality (XR) as pivotal players reshaping industries. These technologies exemplify varying stages of maturity, underscoring the uneven pace of adoption across sectors.

Artificial Intelligence Advancements and Generative AI

AI remains a dominant theme in the Gartner Hype Cycle 2023 emerging technologies, with generative AI models—capable of producing human-like text, images, and code—occupying a prominent position near the Peak of Inflated Expectations. This placement captures both the excitement surrounding AI's potential to revolutionize content creation, software development, and customer interaction, and the caution warranted by unresolved issues such as bias, ethical concerns, and computational costs.

The report highlights how enterprises increasingly integrate AI-driven automation to enhance operational efficiency, but stresses that overreliance on immature AI solutions can lead to disillusionment. Practical use cases like AI-assisted drug discovery and predictive maintenance are moving toward the Slope of Enlightenment, where tangible outcomes validate investment.

Digital Twins: From Concept to Operational Asset

Digital twins—virtual replicas of physical systems—have transitioned from experimental applications to valuable tools in industries such as manufacturing, urban planning, and healthcare. Gartner places digital twins on the Slope of Enlightenment, reflecting growing maturity and market acceptance.

Organizations leveraging digital twins benefit from enhanced simulation capabilities, predictive analytics, and improved decision-making. Quantum Computing: Potential Meets Practicality Challenges

Quantum computing continues to captivate the imagination with its promise of solving complex problems beyond the reach of classical computers. In 2023, Gartner positions quantum computing at the Innovation Trigger phase, underscoring ongoing research breakthroughs but acknowledging the substantial technical

hurdles ahead.

While some industries, such as pharmaceuticals and finance, are exploring quantum algorithms for optimization and simulation, widespread commercial use remains years away. The report advises cautious optimism, recommending that organizations monitor developments closely but avoid premature investments until the technology reaches greater scalability and reliability.

Extended Reality (XR) and the Metaverse

The convergence of augmented reality (AR), virtual reality (VR), and mixed reality (MR) technologies into the broader concept of XR garners significant attention in the Gartner Hype Cycle 2023 emerging technologies. Positioned near the Peak of Inflated Expectations, XR technologies promise transformative applications in training, remote collaboration, and entertainment.

However, the hype surrounding the metaverse has led some enterprises to overestimate near-term benefits, resulting in disillusionment when user adoption and content ecosystems fail to meet expectations. Gartner's analysis emphasizes the importance of developing practical, user-centric XR experiences that solve real business problems to navigate beyond the trough.

Emerging Themes and Strategic Implications

The 2023 hype cycle reveals several overarching themes influencing the trajectory of emerging technologies:

- **Hybrid Cloud and Edge Computing Synergy:** Technologies enabling seamless integration between cloud platforms and edge devices are gaining traction, facilitating real-time data processing and low-latency applications.

gartner hype cycle 2023 emerging technologies: *Autonomous Consumer Business* Julian Morgen, 2024-07-23 Eine immer mehr digital vernetzte Welt führt zu einer sehr großen Menge von unterschiedlichen Daten, die in Echtzeit generiert werden („Big Data“). Ein großer Teil dieser Datenproduzenten sind Nutzer von Social Media oder auch smarten Geräten, wie bspw. Fitnesstrackern oder mit dem Internet verbundenen Waschmaschinen („IoT“). Unternehmen, die sich diese Daten aus der direkten Lebenswelt der Konsumenten zu Nutze machen, können sehr präzise Einblicke bspw. über Einstellungen, Verhalten oder auch die Bedürfnisse potenzieller Kunden erhalten, wodurch der Weg zu einer „automatisierten Vermarktung“ geebnet wird. Zielsetzung dieses Buches ist die Entwicklung eines Konzeptes für ein Autonomous Consumer Business (ACB), das als maximal eigenständig agierendes und durch Künstliche Intelligenz getragenes Geschäftsmodell verstanden wird, bei dem Unternehmen die Bedürfnisse auf der Konsumentenseite automatisch erkennen und durch entsprechende Leistungsangebote befriedigen können. Weiterhin werden zentrale Bestimmungsgrößen, welche die konsumentenseitige Inanspruchnahme eines ACB im besonderen Maße beeinflussen, sowie potenzielle Kundengruppen empirisch identifiziert, wodurch Hinweise zur konkreten Ausgestaltung eines ACB gewonnen werden können.

gartner hype cycle 2023 emerging technologies: *Social Robot Experience* Mi Meurer, 2025-03-03 Service-Roboter halten zunehmend Einzug in die Lebenswelt der Konsumenten und

unterstützen diese bei ihren Alltagstätigkeiten. Dadurch verändern sie auch die sog. Customer Experience (CE) der Konsumenten. Diese Social Robot Experience (SRE) steht im Zentrum des Bandes. Es wird die zentrale Frage untersucht, ob und in welcher Richtung der Einsatz von Social Robots die CE eines Konsumenten verändert. Basierend auf einer Literaturanalyse wird zunächst das sog. IKEV-Modell zur Erklärung der Customer Experience entwickelt, welches nach weiteren konzeptionellen Überlegungen hinsichtlich des Einflusses von Social Robots zu einem SRE-Wirkungsmodell konzeptioniert wird. Die theoretisch-konzeptionellen Überlegungen werden sodann am Anwendungsfeld „Mensabesuch“ einer empirischen Prüfung unterzogen. Zu diesem Zweck wird das SRE-Wirkungsmodell zunächst auf den Einsatz des Social Robots „Pepper“ in der Mensa der Universität Trier von dem Kauf- bis hin zum Nutzungsprozess angepasst und in einer quantitativen Studie untersucht. Durch die Anwendung eines Experimentaldesigns kann der Effekt von Pepper auf die CE quantifiziert werden. Sowohl die Operationalisierung als auch die empirische Modellprüfung erfolgt über unterschiedliche Ansätze. Mit dem Vergleich, ob diese unterschiedlichen Ansätze zu unterschiedlichen Ergebnissen führen, verfolgt der Band auch eine methodische Forschungsintention, um Handlungsempfehlung für die empirische Wissenschaft abzuleiten.

Gooyabadi, Zahra GorjianKhanzad, Newton Lee, 2023-12-14 In this compelling journey into Digital Transformation (DT) tailored for Nonprofit Organizations (NPOs), this book unravels the intricacies of technological integration. Grounded in over one hundred years of extensive research by authors and the editor, real-world examples, and using the San Diego Diplomacy Council (SDDC) as a primary case study, it introduces a tailored Digital Maturity Model (DMM) for NPOs. At the heart of this transformation are three pivotal pillars: Culture, Ethics, and Security. Part I sets the stage, painting a landscape of how NPOs have intertwined with the digital realm. As technology's omnipresence surges, Chapter Two offers a panorama of DT's historical and contemporary intersections with the nonprofit sector. The subsequent chapter emphasizes the stark reality: for many NPOs, digital adaptation is no longer about relevance but survival. Part II delves into the comparative digital strategies of NPOs and their for-profit counterparts in Chapter 4, highlighting the need for tailored approaches. Chapter 5 explores the Nonprofit Digital Maturity Model (NDMM), using the San Diego Diplomacy Council as a focal point. The journey then unfolds further in Chapter 6, which casts a spotlight on the strategic execution of DT in NPOs, weaving in comprehensive analyses to dissect the forces shaping an NPO's digital trajectory. Part III dives deeper, with Chapter 7 laying the foundation of the NDMM. The subsequent chapter meticulously unpacks the NDMM, culminating in Chapter 9, which emphasizes the pillars of DT—Culture, Ethics, and Security—forming the essence of the Nonprofit DT Strategic Framework (NDTSF). This chapter also crafts a tailored roadmap for NPOs, charting a comprehensive DT course. Concluding with a forward-looking stance, Chapter 10 thrusts readers into the enthralling fusion of AI and NPOs, exploring transformative potentials and ethical concerns. Through real-world cases, it positions AI as both a potent tool and a vital dialogue for NPOs. Essentially, this book equips NPOs with tools like the NDMM and insights from successful DT narratives. It seeks to provide a practical guide for nonprofits through their DT journey, ensuring they harness technology ethically and effectively without compromising their core values.
