

gene expression analysis microarray

Gene Expression Analysis Microarray: Unlocking the Secrets of Gene Activity

gene expression analysis microarray is a powerful technique that has revolutionized the way scientists understand how genes behave across different conditions. By enabling researchers to observe the activity of thousands of genes simultaneously, this technology offers invaluable insights into cellular processes, disease mechanisms, and potential therapeutic targets. Whether you're delving into cancer research, developmental biology, or personalized medicine, gene expression microarrays provide a window into the dynamic world of gene regulation.

Understanding Gene Expression Analysis Microarray

At its core, gene expression analysis microarray involves examining the levels of messenger RNA (mRNA) molecules produced by genes within a sample. Since mRNA reflects gene activity, measuring its abundance helps researchers determine which genes are turned "on" or "off" in different tissues, states, or environments.

Microarrays are essentially small chips embedded with thousands of DNA probes designed to hybridize with specific gene sequences. When a sample's labeled RNA or complementary DNA (cDNA) is applied to the chip, complementary strands bind to their respective probes. The resulting hybridization pattern, detected through fluorescence or other signals, reveals which genes are expressed and to what extent.

How Microarrays Work: A Step-by-Step Overview

1. **Sample Preparation:** RNA is extracted from the cells or tissues of interest.
2. **Labeling:** The RNA is reverse-transcribed into cDNA, labeled with fluorescent dyes.
3. **Hybridization:** The labeled cDNA is applied to the microarray chip, allowing it to bind to complementary DNA probes.
4. **Washing:** Excess and non-specifically bound material is washed away to reduce background noise.
5. **Scanning:** A laser scanner detects fluorescence signals, indicating gene expression levels.
6. **Data Analysis:** Specialized software interprets the intensity of signals, quantifying gene activity.

This process enables researchers to simultaneously monitor thousands of

genes, providing a broad snapshot of cellular function.

Applications of Gene Expression Analysis Microarray

Gene expression microarrays have found applications across a spectrum of biological and medical fields. Their ability to capture complex gene activity patterns at once makes them indispensable for many studies.

Disease Diagnosis and Classification

One of the groundbreaking uses of microarrays has been in cancer research. Tumors often exhibit distinct gene expression profiles, which microarrays help identify. By comparing these patterns, clinicians can classify cancer subtypes more accurately, predict patient prognosis, and tailor treatments accordingly. For example, breast cancer subtyping based on gene expression signatures has led to more personalized therapeutic strategies.

Drug Development and Toxicology

Pharmaceutical researchers use gene expression microarrays to assess how drugs affect cellular pathways. By observing changes in gene activity after treatment, they can identify potential drug targets, understand mechanisms of action, and detect adverse effects early in development. This approach accelerates drug discovery and enhances safety profiles.

Basic Biological Research

Beyond clinical applications, gene expression analysis helps unravel fundamental biological questions. From studying developmental stages to understanding responses to environmental stimuli, microarrays provide a comprehensive look at gene regulation networks.

Advantages and Limitations of Microarray Technology

While gene expression microarrays have been a cornerstone of genomics research, it's important to recognize their strengths and challenges.

Advantages

- **High Throughput:** Ability to analyze thousands of genes in a single experiment saves time and resources.
- **Established Protocols:** Well-developed methods and extensive databases support reliable and reproducible results.
- **Comparative Analysis:** Effective for comparing gene expression across different samples or conditions.

Limitations

- **Limited to Known Sequences:** Microarrays require prior knowledge of gene sequences to design probes, limiting discovery of novel transcripts.
- **Sensitivity Issues:** Less sensitive than newer technologies like RNA sequencing for detecting low-abundance transcripts.
- **Dynamic Range Constraints:** Fluorescence signals may saturate at very high expression levels, affecting quantification accuracy.

Despite these limitations, microarrays remain a valuable tool, especially in contexts where cost-effectiveness and standardized workflows are priorities.

Data Analysis and Interpretation in Gene Expression Microarrays

Collecting data from a microarray experiment is only the beginning. The challenge lies in transforming raw fluorescence intensities into meaningful biological insights.

Preprocessing and Normalization

Raw data often contain technical variations due to sample preparation, labeling efficiency, or scanner settings. Normalization techniques adjust for these discrepancies, ensuring that observed differences in gene expression reflect true biological variation rather than experimental artifacts.

Common normalization methods include:

- **Quantile normalization:** Equalizes distribution of intensities across arrays.
- **Loess normalization:** Adjusts for intensity-dependent biases.

Statistical Analysis

Once normalized, statistical tests identify genes differentially expressed between groups (e.g., diseased vs. healthy). Tools such as t-tests, ANOVA, and multiple testing corrections help pinpoint significant changes while controlling false discovery rates.

Biological Interpretation

After identifying differentially expressed genes, researchers often perform pathway analysis, gene ontology enrichment, or clustering to uncover functional relationships and biological themes. Integrating microarray data with other datasets, such as proteomics or metabolomics, can provide a more comprehensive picture of cellular states.

Tips for Successful Gene Expression Analysis Using Microarrays

If you're planning to embark on a microarray experiment, here are some practical pointers to enhance your outcomes:

- **Sample Quality Matters:** High-quality, intact RNA is essential for reliable results. Use RNA integrity number (RIN) assessments to verify sample health.
- **Replicates Are Key:** Include biological replicates to capture variability and increase statistical power.
- **Appropriate Controls:** Incorporate positive and negative controls to monitor hybridization efficiency and detect background noise.
- **Use Updated Arrays:** Choose microarray platforms with comprehensive and current gene annotations to maximize coverage.
- **Leverage Bioinformatics Support:** Collaborate with bioinformaticians or use validated software pipelines for robust data analysis.

The Future of Gene Expression Analysis: Microarrays vs. RNA-Seq

While microarrays have been instrumental in advancing genomics, the rise of RNA sequencing (RNA-Seq) technology offers exciting new possibilities. RNA-Seq provides higher resolution, detects novel transcripts, and offers a broader dynamic range. However, microarrays still hold value due to their cost-effectiveness, ease of use, and large existing datasets that facilitate comparative studies.

Many researchers now integrate both technologies, using microarrays for initial screening and RNA-Seq for deeper exploration. This complementary approach maximizes insights while balancing resources.

Exploring gene expression analysis microarray continues to unlock the complexities of genomics, enabling discoveries that push the boundaries of science and medicine. As technology evolves, so too will our ability to decode the language of genes, paving the way for personalized therapies and a deeper understanding of life itself.

Frequently Asked Questions

What is gene expression analysis using microarray technology?

Gene expression analysis using microarray technology involves measuring the expression levels of thousands of genes simultaneously by hybridizing labeled cDNA or RNA samples to a chip containing thousands of gene-specific probes. This allows researchers to determine which genes are upregulated or downregulated under specific conditions.

How does microarray gene expression analysis compare to RNA-Seq?

Microarray analysis is a hybridization-based method that requires known gene sequences and provides relative expression levels, while RNA-Seq sequences the entire transcriptome, including novel transcripts, and offers a wider dynamic range and higher sensitivity. RNA-Seq is increasingly preferred, but microarrays remain cost-effective for certain applications.

What are the key steps involved in performing gene expression analysis using microarrays?

Key steps include RNA extraction from samples, labeling the RNA or cDNA with fluorescent dyes, hybridizing the labeled samples to the microarray chip,

washing and scanning the chip to detect fluorescence intensity, and analyzing the data to determine differential gene expression.

What are common challenges or limitations of microarray-based gene expression analysis?

Common challenges include cross-hybridization leading to non-specific signals, limited dynamic range, dependence on existing gene sequence knowledge, difficulty detecting low-abundance transcripts, and potential batch effects impacting reproducibility.

How is data normalization performed in microarray gene expression analysis?

Data normalization is performed to correct for technical variations and make expression levels comparable across arrays. Common methods include global mean normalization, quantile normalization, and robust multi-array average (RMA), which adjust the signal intensities to reduce biases and improve accuracy.

What applications benefit from gene expression analysis using microarrays?

Applications include identifying disease biomarkers, studying gene regulation under different conditions, drug response profiling, cancer subtype classification, and understanding developmental biology and environmental effects on gene expression.

Additional Resources

Gene Expression Analysis Microarray: A Comprehensive Review

gene expression analysis microarray technology has revolutionized the field of molecular biology by enabling researchers to measure the expression levels of thousands of genes simultaneously. This high-throughput technique offers a powerful platform for understanding gene function, disease mechanisms, and cellular responses to environmental stimuli. Since its inception in the mid-1990s, microarray analysis has become an indispensable tool in genomics, providing critical insights that facilitate advancements in diagnostics, therapeutics, and personalized medicine.

Understanding Gene Expression Analysis Microarray Technology

Gene expression analysis microarray refers to the use of microarray chips –

glass or silicon slides embedded with thousands of DNA probes – to quantitatively assess the transcriptome of a biological sample. This approach allows scientists to capture snapshots of gene activity patterns, revealing upregulated or downregulated genes under specific conditions. The microarray platform employs hybridization principles, where fluorescently labeled complementary DNA (cDNA) or RNA is allowed to bind to the probes on the array, and the intensity of the fluorescent signal corresponds to the abundance of the target transcripts.

Core Components and Workflow

The typical gene expression microarray workflow involves several key steps:

- **Sample Preparation:** Extraction of high-quality RNA from tissues or cells, followed by reverse transcription to produce labeled cDNA or cRNA.
- **Hybridization:** Application of labeled nucleic acids onto the microarray chip, allowing them to hybridize with complementary probes.
- **Washing and Scanning:** Removal of unbound material and scanning the chip using laser scanners to detect fluorescence intensity.
- **Data Analysis:** Processing raw signal data to normalize expression levels, identify differentially expressed genes, and interpret biological significance.

This structured process underpins the reliability and reproducibility of gene expression microarray experiments.

Advantages of Gene Expression Microarrays in Research

Gene expression analysis microarray offers a range of benefits that have made it a staple technique in genomic investigations:

- **High Throughput Capability:** Ability to analyze tens of thousands of genes simultaneously in a single experiment, facilitating comprehensive transcriptomic profiling.
- **Cost-Effectiveness:** Compared with newer sequencing technologies, microarrays often present a more affordable option for gene expression studies, especially when analyzing predefined gene sets.

- **Established Protocols and Databases:** Given the technology's longevity, extensive protocols and curated gene expression databases enable efficient data comparison and validation.
- **Rapid Turnaround:** Experiments can be completed within days, allowing for timely analysis and hypothesis testing.

These features are particularly valuable in clinical research settings where rapid, large-scale gene expression profiling is essential.

Challenges and Limitations

Despite its advantages, gene expression microarray technology has inherent limitations that researchers must consider:

- **Limited Dynamic Range:** Microarrays can struggle to accurately quantify very low or very high abundance transcripts due to signal saturation or background noise.
- **Probe Design Constraints:** The reliance on predefined probes restricts detection to known sequences, potentially missing novel transcripts or splice variants.
- **Cross-Hybridization Risks:** Non-specific binding can lead to false positives or ambiguous results, complicating data interpretation.
- **Data Normalization Complexities:** Variations in sample quality, labeling efficiency, and hybridization conditions necessitate rigorous normalization steps to ensure comparability.

As next-generation sequencing (NGS) techniques advance, these drawbacks have prompted a gradual shift toward RNA-Seq for transcriptome analysis, although microarrays remain relevant in many contexts.

Applications of Gene Expression Analysis Microarray

The versatility of gene expression microarray technology has led to its widespread application across diverse fields of biology and medicine.

Disease Biomarker Discovery

Microarray-based gene expression profiling has been instrumental in identifying biomarkers for various diseases, including cancer, autoimmune disorders, and infectious diseases. By comparing gene expression patterns between diseased and healthy tissues, researchers can uncover molecular signatures that aid in diagnosis, prognosis, and therapeutic targeting. For instance, breast cancer subtyping through microarray data has enhanced personalized treatment strategies by distinguishing between hormone receptor statuses and potential drug responses.

Pharmacogenomics and Drug Development

In pharmaceutical research, gene expression microarrays facilitate the evaluation of drug effects at the molecular level. This technology helps in understanding mechanisms of drug action, toxicity profiles, and resistance development. Screening gene expression changes in response to candidate compounds accelerates the identification of promising therapeutics and optimization of dosing regimens.

Functional Genomics and Systems Biology

Gene expression microarrays contribute to elucidating gene regulatory networks and pathways, providing insights into cellular processes and environmental responses. Integration of microarray data with proteomics and metabolomics enhances systems biology approaches, enabling a holistic view of biological function and interaction.

Comparative Perspectives: Microarrays vs. RNA-Seq

While gene expression analysis microarray remains widely used, RNA sequencing (RNA-Seq) has emerged as a powerful alternative for transcriptomic studies. It is important to contextualize their comparative strengths:

- **Data Output:** RNA-Seq can detect novel transcripts, alternative splicing events, and allele-specific expression, whereas microarrays are limited to predefined probes.
- **Quantitative Accuracy:** RNA-Seq offers a broader dynamic range and higher sensitivity for low abundance transcripts than microarrays.
- **Cost Considerations:** Microarrays generally cost less per sample, making

them suitable for large-scale screening projects with budget constraints.

- **Computational Requirements:** RNA-Seq requires more advanced bioinformatics expertise and computational resources due to the complexity of sequence data processing.

Many research groups adopt a complementary approach, utilizing microarrays for preliminary screening and RNA-Seq for detailed follow-up studies.

Future Perspectives and Technological Innovations

Continuous improvements in microarray design and analysis algorithms have sustained the relevance of gene expression analysis microarray in modern research. Innovations such as tiling arrays and exon arrays broaden the scope of transcript detection, while integration with machine learning techniques enhances data interpretation and predictive modeling.

Moreover, multiplexed microarray platforms enable simultaneous analysis of gene expression alongside other molecular markers, such as DNA methylation and microRNA profiles, offering multidimensional insights into gene regulation.

As precision medicine advances, the demand for robust, scalable gene expression profiling tools is likely to maintain the significance of microarrays, especially in clinical diagnostics where standardized assays and rapid results are paramount.

In the evolving landscape of genomic technologies, gene expression analysis microarray continues to serve as a foundational method, balancing accessibility, throughput, and analytical depth. Its role in advancing our understanding of gene function and disease biology underscores the enduring impact of this technology on scientific discovery.

Gene Expression Analysis Microarray

gene expression analysis microarray: Analyzing Microarray Gene Expression Data

Geoffrey J. McLachlan, Kim-Anh Do, Christophe Ambroise, 2005-02-18 A multi-discipline, hands-on guide to microarray analysis of biological processes Analyzing Microarray Gene Expression Data provides a comprehensive review of available methodologies for the analysis of data derived from the latest DNA microarray technologies. Designed for biostatisticians entering the field of microarray analysis as well as biologists seeking to more effectively analyze their own experimental data, the text features a unique interdisciplinary approach and a combined academic and practical

perspective that offers readers the most complete and applied coverage of the subject matter to date. Following a basic overview of the biological and technical principles behind microarray experimentation, the text provides a look at some of the most effective tools and procedures for achieving optimum reliability and reproducibility of research results, including: An in-depth account of the detection of genes that are differentially expressed across a number of classes of tissues Extensive coverage of both cluster analysis and discriminant analysis of microarray data and the growing applications of both methodologies A model-based approach to cluster analysis, with emphasis on the use of the EMMIX-GENE procedure for the clustering of tissue samples The latest data cleaning and normalization procedures The uses of microarray expression data for providing important prognostic information on the outcome of disease

gene expression analysis microarray: Microarray Gene Expression Data Analysis Helen Causton, John Quackenbush, Alvis Brazma, 2009-04-01 This guide covers aspects of designing microarray experiments and analysing the data generated, including information on some of the tools that are available from non-commercial sources. Concepts and principles underpinning gene expression analysis are emphasised and wherever possible, the mathematics has been simplified. The guide is intended for use by graduates and researchers in bioinformatics and the life sciences and is also suitable for statisticians who are interested in the approaches currently used to study gene expression. Microarrays are an automated way of carrying out thousands of experiments at once, and allows scientists to obtain huge amounts of information very quickly Short, concise text on this difficult topic area Clear illustrations throughout Written by well-known teachers in the subject Provides insight into how to analyse the data produced from microarrays

gene expression analysis microarray: Advanced Analysis of Gene Expression Microarray Data Aidong Zhang, 2006 Focuses on the development and application of the latest advanced data mining, machine learning, and visualization techniques for the identification of interesting, significant, and novel patterns in gene expression microarray data. Describes cutting-edge methods for analyzing gene expression microarray data. Coverage includes gene-based analysis, sample-based analysis, pattern-based analysis and visualization tools.

gene expression analysis microarray: Analysis of Microarray Gene Expression Data Mei-Ling Ting Lee, 2007-05-08 After genomic sequencing, microarray technology has emerged as a widely used platform for genomic studies in the life sciences. Microarray technology provides a systematic way to survey DNA and RNA variation. With the abundance of data produced from microarray studies, however, the ultimate impact of the studies on biology will depend heavily on data mining and statistical analysis. The contribution of this book is to provide readers with an integrated presentation of various topics on analyzing microarray data.

gene expression analysis microarray: Statistical Analysis of Gene Expression Microarray Data Terry Speed, 2003-03-26 Although less than a decade old, the field of microarray data analysis is now thriving and growing at a remarkable pace. Biologists, geneticists, and computer scientists as well as statisticians all need an accessible, systematic treatment of the techniques used for analyzing the vast amounts of data generated by large-scale gene expression studies

gene expression analysis microarray: Microarray Data Analysis Michael J. Korenberg, 2008-02-03 In this new volume, renowned authors contribute fascinating, cutting-edge insights into microarray data analysis. Information on an array of topics is included in this innovative book including in-depth insights into presentations of genomic signal processing. Also detailed is the use of tiling arrays for large genomes analysis. The protocols follow the successful *Methods in Molecular Biology*TM series format, offering step-by-step instructions, an introduction outlining the principles behind the technique, lists of the necessary equipment and reagents, and tips on troubleshooting and avoiding pitfalls.

gene expression analysis microarray: *The Analysis of Gene Expression Data* Giovanni Parmigiani, Elizabeth S. Garrett, Rafael A. Irizarry, Scott L. Zeger, 2003-04-08 This book presents practical approaches for the analysis of data from gene expression micro-arrays. It describes the conceptual and methodological underpinning for a statistical tool and its implementation in

software. The book includes coverage of various packages that are part of the Bioconductor project and several related R tools. The materials presented cover a range of software tools designed for varied audiences.

gene expression analysis microarray: DNA Microarrays: Gene Expression Applications

B.R. Jordan, 2013-12-01 This complete and practical manual on expression measurement using DNA arrays covers the existing methods (from nylon macroarrays to oligonucleotide chips) and includes detailed protocols. It has been written by practising scientists who have experienced the difficulties involved in actually using microarrays, and provides helpful advice and hints on setting up these powerful but sometimes tricky methods. Software, data mining procedures and probable future developments, which should be useful to any practising scientist interested in expression measurement, are also covered in this book. It also provides detailed protocols as well as many helpful hints to achieve experimental success and to avoid pitfalls.

gene expression analysis microarray: Dna Microarray Technology And Data Analysis In Cancer Research

Shaoguang Li, Dongguang Li, 2009-02-04 DNA microarray technology has become a useful technique in gene expression analysis for the development of new diagnostic tools and for the identification of disease genes and therapeutic targets for human cancers. Appropriate control for DNA microarray experiment and reliable analysis of the array data are key to performing the assay and utilizing the data correctly. The most difficult challenge has been the lack of a powerful method to analyze the data for all genes (more than 30,000 genes) simultaneously and to use the microarray data in a decision-making process. In this book, the authors describe DNA microarray technology and data analysis by pointing out current advantages and disadvantages of the technique and available analytical methods. Crucially, new ideas and analytical methods based on the authors' own experience in DNA microarray study and analysis are introduced. It is believed that this new way of interpreting and analyzing microarray data will bring us closer to success in decision-making using the information obtained through the DNA microarray technology.

gene expression analysis microarray: DNA Microarrays and Gene Expression

Pierre Baldi, G. Wesley Hatfield, 2011-04-28 Massive data acquisition technologies, such as genome sequencing, high-throughput drug screening, and DNA arrays are in the process of revolutionizing biology and medicine. Using the mRNA of a given cell, at a given time, under a given set of conditions, DNA microarrays can provide a snapshot of the level of expression of all the genes in the cell. Such snapshots can be used to study fundamental biological phenomena such as development or evolution, to determine the function of new genes, to infer the role individual genes or groups of genes may play in diseases, and to monitor the effect of drugs and other compounds on gene expression. Originally published in 2002, this inter-disciplinary introduction to DNA arrays will be of value to anyone with an interest in this powerful technology.

gene expression analysis microarray: Gene Function Analysis

Michael F. Ochs, 2007-08-23 With the advent of high-throughput technologies following completion of the human genome project and similar projects, the number of genes of interest has expanded and the traditional methods for gene function analysis cannot achieve the throughput necessary for large-scale exploration. This book brings together a number of recently developed techniques for looking at gene function, including computational, biochemical and biological methods and protocols.

gene expression analysis microarray: Microarrays and Microplates

Ian Day, S Ye, 2023-05-31 The 'Advanced Methods' series is intended for advanced undergraduates, postgraduates and established research scientists. Titles in the series are designed to cover current important areas of research in life sciences, and include both theoretical background and detailed protocols. The aim is to give researchers sufficient theory, supported by references, to take the given protocols and adapt them to their particular experimental systems. Microarrays and Microplates title looks at the new microarray and microplate-based technologies which facilitate large-scale analysis of DNA sequence variants, mRNA molecules and proteins. The book provides a review of the various methodologies being used to identify genetic variants and gene regulation and guides readers through both the application of these methodologies and experimental procedures.

gene expression analysis microarray: Microarray Gene Expression Analysis, 2018 A simple transform function is proposed to preprocess the intensity of gene expression, where the intensity can be that of a colored dye for cDNA microarrays or a gauge of probe matching for oligonucleotide arrays. A new measure of skewness is introduced to show that the transform function effectively reduces the asymmetry of intensity values for Affymetrix data of Golub et al. (1999). This transform approaches a logarithmic transform for large intensities, but approaches a linear transform for small intensities, so that the effect of spurious ratios of small intensities is avoided. When the intensity is the average difference (AD) score, the suggested transform function preserves the stochastic nature of AD values rather than resetting negative values to arbitrary positive values. A conservative estimator of the fold-change based on this transform is proposed. After the B-cell ALL and the AML data of Golub et al. (1999) was transformed, a nonparametric bootstrapping method found that the number of genes considered differentially expressed is 172 when controlling the family-wise error rate at the 5% level and 709 when controlling the false-discovery rate at the 1% level.

gene expression analysis microarray: Exploration and Analysis of DNA Microarray and Protein Array Data Dhammika Amaratunga, Javier Cabrera, 2009-09-25 A cutting-edge guide to the analysis of DNA microarray data Genomics is one of the major scientific revolutions of this century, and the use of microarrays to rapidly analyze numerous DNA samples has enabled scientists to make sense of mountains of genomic data through statistical analysis. Today, microarrays are being used in biomedical research to study such vital areas as a drug's therapeutic value-or toxicity-and cancer-spreading patterns of gene activity. *Exploration and Analysis of DNA Microarray and Protein Array Data* answers the need for a comprehensive, cutting-edge overview of this important and emerging field. The authors, seasoned researchers with extensive experience in both industry and academia, effectively outline all phases of this revolutionary analytical technique, from the preprocessing to the analysis stage. Highlights of the text include: A review of basic molecular biology, followed by an introduction to microarrays and their preparation Chapters on processing scanned images and preprocessing microarray data Methods for identifying differentially expressed genes in comparative microarray experiments Discussions of gene and sample clustering and class prediction Extension of analysis methods to protein array data Numerous exercises for self-study as well as data sets and a useful collection of computational tools on the authors' Web site make this important text a valuable resource for both students and professionals in the field.

gene expression analysis microarray: Guide to Analysis of DNA Microarray Data Steen Knudsen, 2005-02-18 Written for biologists and medical researchers who don't have any special training in data analysis and statistics, *Guide to Analysis of DNA Microarray Data*, Second Edition begins where DNA array equipment leaves off: the image produced by the microarray. The text deals with the questions that arise starting at this point, providing an introduction to microarray technology, then moving on to image analysis, data analysis, cluster analysis, and beyond. With all chapters rewritten, updated, and expanded to include the latest generation of technology and methods, *Guide to Analysis of DNA Microarray Data*, Second Edition offers practitioners reliable information using concrete examples and a clear, comprehensible style. This Second Edition features entirely new chapters on: * Image analysis * Experiment design * Automated analysis, integrated analysis, and systems biology * Interpretation of results Intended for readers seeking practical applications, this text covers a broad spectrum of proven approaches in this rapidly growing technology. Additional features include further reading suggestions for each chapter, as well as a thorough review of available analysis software.

gene expression analysis microarray: Grundlagen der Molekularen Medizin Detlev Ganten, Klaus Ruckpaul, 2013-07-02 Die Zunahme unserer Kenntnisse über die molekularen Mechanismen u.a. von Wachstums-, Entwicklungs- und Differenzierungsprozessen hat die Grundlagen der molekularen Medizin innerhalb weniger Jahre erheblich erweitert. In besonderer Weise hat die Aufklärung der Basensequenz des menschlichen Genoms zu dieser Entwicklung beigetragen und die Bildung neuer Forschungsfelder wie Genomics und Proteomics ausgelöst. Die

vorliegende Neuauflage der molekular- und zellbiologischen Grundlagen der Molekularen Medizin will diesen Fortschritt begleiten. In 24 Kapiteln wird der aktuelle Kenntnisstand der Molekularen Medizin von ausgewiesenen Experten dargestellt. Dieser Band sei all denen empfohlen, die als Biowissenschaftler - seien es Mediziner, Biologen, Biochemiker oder Biophysiker - an diesem Fortschritt teilhaben wollen.

gene expression analysis microarray: Gene Expression Studies Using Affymetrix Microarrays Hinrich Gohlmann, Willem Talloen, 2009-07-15 The Affymetrix GeneChip system is one of the most widely adapted microarray platforms. However, due to the overwhelming amount of information available, many Affymetrix users tend to stick to the default analysis settings and may end up drawing sub-optimal conclusions. Written by a molecular biologist and a biostatistician with a combined decade of

gene expression analysis microarray: Methods of Microarray Data Analysis V Patrick McConnell, Simon Lin, Patrick Hurban, 2007-02-24 As studies using microarray technology have evolved, so have the data analysis methods used to analyze these experiments. The CAMDA (Critical Assessment of Microarray Data Analysis) conference was the first to establish a forum for a cross section of researchers to look at a common data set and apply innovative analytical techniques to microarray data. Methods of Microarray Analysis V includes selected papers from CAMDA'04, and focuses on data sets relating to a significant global health issue, malaria. Previous books focused on classification (V. I), pattern recognition (V. II), quality control issues (V. III), and associating array data with a survival endpoint, lung cancer, (V. IV). The contributions come from research fields including statistics, biology, computer science and mathematics. Part of the book is devoted to review papers, which provide a more general look at various analytical approaches. It also presents some background readings for the advanced topics discussed in the CAMDA papers.

gene expression analysis microarray: Microarray Innovations Gary Hardiman, 2009-04-02 In recent years, high-density DNA microarrays have revolutionized biomedical research and drug discovery efforts by the pharmaceutical industry. Their efficacy in identifying and prioritizing drug targets based on their ability to confirm a large number of gene expression measurements in parallel has become a key element in drug discovery. Microarr

gene expression analysis microarray: Microarray Detection and Characterization of Bacterial Foodborne Pathogens Guillermo López-Campos, Joaquín V. Martínez-Suárez, Mónica Aguado-Urda, Victoria López-Alonso, 2012-03-12 This is a review of recent advances on the use of DNA microarray for diagnosing foodborne pathogens. Rapid detection and characterization of foodborne pathogens is critical for food safety. Many relevant technologies have been intensively developed to date. DNA microarray technology offers a new way to food safety involving pathogen detection and characterization. DNA microarray can be used for detection and characterization of pathogens by analyzing hybridization patterns between capture probes and nucleic acids isolated from food samples or bacteria. It allows more rapid, accurate, and cost-effective detection of pathogens compared with traditional approaches of cultivation or immuno-assays. The application of DNA microarrays to different foodborne bacteria, such as Campylobacter, Salmonella, Listeria monocytogenes, or Shiga toxin producing Escherichia coli, will improve their rapid identification and characterization of their genetic traits (e.g., antimicrobial resistance, virulence). As bacterial foodborne diseases are posing more serious threats to public healthcare, development of rapid and accurate methods for pathogen detection and characterization is critical to their proper control at the earliest time.

TGFB1 Gene - GeneCards | TGFB1 Protein | TGFB1 Antibody Complete information for TGFB1 gene (Protein Coding), Transforming Growth Factor Beta 1, including: function, proteins, disorders, pathways, orthologs, and expression

MT-CYB Gene - GeneCards | CYB Protein | CYB Antibody Complete information for MT-CYB gene (Protein Coding), Mitochondrially Encoded Cytochrome B, including: function, proteins, disorders, pathways, orthologs, and expression

NFKB1 Gene - GeneCards | NFKB1 Protein | NFKB1 Antibody Complete information for NFKB1 gene (Protein Coding), Nuclear Factor Kappa B Subunit 1, including: function, proteins, disorders, pathways, orthologs, and expression

PIK3CA Gene - GeneCards | PK3CA Protein | PK3CA Antibody Complete information for PIK3CA gene (Protein Coding), Phosphatidylinositol-4,5-Bisphosphate 3-Kinase Catalytic Subunit Alpha, including: function, proteins, disorders,

ACSL4 Gene - GeneCards | ACSL4 Protein | ACSL4 Antibody Complete information for ACSL4 gene (Protein Coding), Acyl-CoA Synthetase Long Chain Family Member 4, including: function, proteins, disorders, pathways, orthologs, and

MYCN Gene - GeneCards | MYCN Protein | MYCN Antibody This gene is a member of the MYC family and encodes a protein with a basic helix-loop-helix (bHLH) domain. This protein is located in the nucleus and must dimerize with

FOXO3 Gene - GeneCards | FOXO3 Protein | FOXO3 Antibody This gene belongs to the forkhead family of transcription factors which are characterized by a distinct forkhead domain. This gene likely functions as a trigger for

BRAF Gene - GeneCards | BRAF Protein | BRAF Antibody Complete information for BRAF gene (Protein Coding), B-Raf Proto-Oncogene, Serine/Threonine Kinase, including: function, proteins, disorders, pathways, orthologs, and

GeneCards - Human Genes | Gene Database | Gene Search The knowledgebase automatically integrates gene-centric data from ~200 web sources, including genomic, transcriptomic, proteomic, genetic, clinical and functional information

Advanced Search - GeneCards The GeneCards human gene database index: 1 7 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z Terms and Conditions User Feedback Privacy Policy

TGFB1 Gene - GeneCards | TGFB1 Protein | TGFB1 Antibody Complete information for TGFB1 gene (Protein Coding), Transforming Growth Factor Beta 1, including: function, proteins, disorders, pathways, orthologs, and expression

New method tracks gene expression changes to reveal cell fate decisions (Phys.org24d)

Essentially all cells in an organism's body have the same genetic blueprint, or genome, but the set of genes that are actively expressed at any given time in a cell determines what type of cell it

Long non-coding RNAs reveal an unexpected way to regulate gene expression

(Phys.org1mon) Long non-coding RNAs (lncRNA) are a type of RNA molecule that do not carry instructions to make proteins. Instead, they influence how other genes are expressed. There are tens of thousands of lncRNAs
