wecare overview training answers: *From Self-Care to We-Care* Jordan Quaglia, 2025-05-06 Learn to harmonize self-care with caring for others through we-care, a science-based approach designed to enhance personal and social well-being, promote healthy boundaries, and offer a path of healing and transformation. Too many of us are familiar with the burnout that can come from overextending ourselves for others. Self-care is often promoted as the solution to this imbalance, but there are growing concerns that an overemphasis on self-care is exacerbating interpersonal challenges, fraying the fabric of our communities, and diminishing our responsiveness to broader social issues. In a world where time can feel increasingly scarce, we find ourselves in a dilemma: should we prioritize ourselves or others? Yet as psychologist and compassion scientist Jordan Quaglia demonstrates, this choice is based on a false dichotomy. The emerging science and practice of we-care reframes the very concept of care as a social force that includes both self and other. Through personal stories, guided inquiries, practical social exercises, and insights from cutting-edge neuroscience, Quaglia offers a framework and toolset designed to help you find a more balanced way to express your innate sense of compassion. This holistic approach sparks transformative changes across your health, relationships, and work—uplifting yourself and others while supporting a stronger, more connected society for us all.

wecare overview training answers: *Do We Care?* K. Sujatha Rao, 2016-12-20 India is one of the fastest-growing economies in the world. Yet health is not a part of our ambitious development story. In fact, India's disproportionately stingy healthcare budget makes some of the poorer nations look better in comparison. Statistics, however, speak louder than critics: we have one of the highest numbers of women dying in childbirth and under-five mortality rates. Every year nearly sixty million people get pushed below the poverty line due to the health expenditures that they incur. But there are a few bright spots too: India has eradicated polio and reversed the incidence of HIV/AIDS by an impressive margin. Drawing on her experience as the former union health secretary, K. Sujatha Rao gives us an unsparingly candid insider's view of India's health system. This richly detailed book favours increasing the health budget, greater use of technology, and providing leadership and good governance. Rao argues that unless good health is prioritized as a national goal, India's growth story will remain largely self-congratulatory.

wecare overview training answers: *Tropical Biodiversity: Why Should We Care?* Ana Maria Rocha de Almeida, Chelsea D. Specht, 2019-06-07 When we look at our planet's species distribution, we observe a very interesting pattern: as we move from the Poles to the Equator, the number of species drastically increases. This is what has been called 'latitudinal gradient of species diversity'. In short, it means that tropical areas, which are located between the Tropic of Cancer and the Tropic of Capricorn, harbor a greater number of species than temperate areas. We still don't know exactly what causes (or have caused) this phenomenon, but we know that it resulted in high endism, that is, a large number of animals and plants unique to these areas. The tropical areas of the globe are an intricate patchwork of various ecosystems. Tropical ecosystems can vary from rainforests to deserts; from savannahs to mangroves, and we have a lot to learn from them. However, in recent years we have witnessed an increase in rates of habitat destruction, particularly in the tropics. Currently, many tropical ecosystems are under threat, as vast areas are devastated to give space to cities, agriculture, and cattle farms. As tropical areas vanish, so do species previously unknown to us, as well as ecological processes specific to these environments. Moreover, due to its global importance, devastation of tropical areas has potential impacts on other non-tropical ecosystems, and may exacerbate climate change, as well as influence the spread of tropical diseases. On the other side of this battle, there are many scientists that dedicated themselves to the study of the fascinating

tropical biodiversity. This collection of articles aims at highlighting their contributions to our understanding of tropical patterns and processes leading to this incredible biodiversity. It focuses on the wonders of the tropical areas of the globe, by asking, amongst others, the following questions: Which species of plants and animals are found in tropical areas? What can we learn about tropical ecology and how can this knowledge help us conserve these ecosystems for future generations?

wecare overview training answers: Why Should We Care? Dale A. Johnson, 2007-03-22 Why should Christians care about the United Nation's Goals on poverty and hunger? Does not God want us to prosper? Will not the poor, the sick, the homeless just drag us down? Are we our brother's keeper? The author gives us compelling reasons why we must care, not because we are a Christian, Buddhist, or Moslem, but because we are human beings and we are inter-connected to the plight of every other human being.

wecare overview training answers: Governing How We Care Susan J. Shaw, 2012-03-02 As local governments and organizations assume more responsibility for ensuring the public health, identity politics play an increasing yet largely unexamined role in public and policy attitudes toward local problems. In *Governing How We Care*, medical anthropologist Susan Shaw examines the relationship between government and citizens using case studies of needle exchange and Welfare-to-Work programs to illustrate the meanings of cultural difference, ethnicity, and inequality in health care. Drawing on ethnographic research conducted over six years in a small New England city, Shaw presents critical perspectives on public health intervention efforts. She looks at online developments in health care and makes important correlations between poverty and health care in the urban United States. Shaw also highlights the new concepts of community and forms of identity that emerge in our efforts to provide effective health care. *Governing How We Care* shows how government-sponsored community health and health care programs operate in an age of neoliberalism.
