TIIP is an integrative model of mental health care that is grounded in the core principles of Islam while

drawing upon empirical truths in psychology. Mental health practitioners who treat Muslim patients, Muslim clinicians, students of the behavioral sciences and related disciplines, and anyone with an interest in spiritually oriented psychotherapies will greatly benefit from this illustrative and practical text.

medical writing masters degree: What Every Medical Writer Needs to Know Robert B. Taylor, 2015-08-29 This book presents must-know facts generally not covered in "How To" books about medical writing. Every medical writer, whether a beginner or veteran, needs answers to questions many might not even know to ask. How does your personality type influence your writing behavior, and what can you do to make writing easier for you? What should you ask before agreeing to co-author an article for publication or write a book chapter? What are some of the current issues regarding copyright and plagiarism that authors may face? What has research discovered about the quotations and references found in journal articles? What do you need to know about open access journals and predatory publishers? Dr. Taylor tells some surprising truths about medical publishing, including possible sources of peer review bias and some alarming influences on what ends up in print. He also relates little-known stories about renowned medical writers such as Sir William Osler, William Carlos Williams and Elisabeth Kübler-Ross and the origins of some of medicine's classic publications. *What Every Medical Writer Needs to Know* provides information vital for every health care professional who aspires to write for others to read: academicians and practicing physicians; nurses, nurse practitioners and physician assistants; and professional medical and scientific writers.

medical writing masters degree: Clinician's Guide to Medical Writing Robert B. Taylor, 2006-03-20 This book is for the clinician who wants to write. It is for the physician, physician assistant, or nurse practitioner who sees patients and who wants to contribute to the medical literature. You may be an assistant professor aspiring to promotion or a clinician in private practice who seeks the personal enrichment that writing can bring. If you are new to medical writing or even if you have been the author of some articles or book chapters and seek to improve your abilities, this book can help you. Who am I that I can make this assertion and write this book, both fairly presumptuous? Here's my reasoning. As a practicing physician, writing has been my avocation; unlike the authors of many other writing books, I am not a journal editor. Over 14 years in private practice and 26 years in academic medicine, I have written all the major models described in this book: review articles, case reports, editorials, letters to the editor, book reviews, book chapters, edited books, authored books, and reports of clinical research studies. Most have been published. Not all. Perhaps my most significant qualification is not that I have managed to produce a lengthy curriculum vitae. In my opinion, what is more important for you, the reader, is that I have made all the errors. That's right, the mistakes.
