How to Practice Pull Ups Without a Bar: Effective Alternatives and Tips

how to practice pull ups without a bar is a question many fitness enthusiasts and beginners alike often ask, especially when they don't have access to a pull-up bar at home or the gym. Pull ups are a fantastic upper-body exercise, targeting muscles like the latissimus dorsi, biceps, and shoulders, but the lack of proper equipment can be a hurdle. Fortunately, there are several creative and effective ways to build the strength and technique needed for pull ups without needing a traditional bar. In this guide, we'll explore alternative exercises, tips, and training methods to help you progress toward doing pull ups anywhere.

Understanding the Mechanics of Pull Ups

Before diving into how to practice pull ups without a bar, it's useful to understand what muscles are involved and why pull ups can be challenging. Pull ups primarily engage your back muscles (especially the lats), biceps, forearms, and core. The movement requires you to pull your entire body weight upwards, which demands both strength and coordination.

If you don't have a pull-up bar, it's important to focus on building the foundational strength in these muscle groups and practicing the pulling motion in alternative ways. This approach will prepare your body to eventually perform full pull ups with confidence.

Bodyweight Exercises That Mimic Pull Up Movements

One effective way to practice pull ups without a bar is by incorporating bodyweight exercises that target the same muscles. These exercises can help increase muscle endurance and strength.

1. Inverted Rows Using a Sturdy Table

If you have a strong, stable table or a low horizontal surface, you can use it to perform inverted rows, which closely mimic the pulling action of a pull up.

- Lie underneath the table and grip the edge with both hands.
- Keep your body straight and pull your chest up towards the table's edge.
- Lower yourself back down with control.

- Aim for 3 sets of 8-12 reps.

This exercise strengthens your back and biceps, helping bridge the gap until you can perform pull ups.

2. Towel Rows on a Door

Another creative option is using a towel and a door to simulate pulling motions.

- Loop a sturdy towel over the top of a closed door.
- Hold both ends and lean back, keeping your feet planted.
- Pull your body toward the door by bending your elbows and squeezing your shoulder blades together.
- Slowly return to the starting position.

This method offers a great way to practice pulling with a controlled range of motion without needing a bar.

3. Resistance Band Pull Down

Resistance bands are versatile tools that replicate the pull-up movement with less body weight.

- Anchor a resistance band to a door or any elevated point.
- Grab the band with both hands and pull it down toward your chest.
- Slowly release it back up.

This exercise builds the same muscle groups but allows you to adjust resistance levels based on your ability.

Strengthening Your Grip and Upper Body Without a Bar

Grip strength plays a vital role in successful pull ups, so improving your grip is essential when you can't hang from a bar.

Farmer's Carries

Holding heavy objects like dumbbells, kettlebells, or even water jugs in each hand and walking around helps develop grip and forearm strength.

- Keep your shoulders back and core tight.
- Walk for 30 to 60 seconds per set.

Isometric Holds on a Door Frame

- Stand in a doorway and grip the door frame at shoulder height.
- Lean back slightly and hold your body weight as long as possible.

This static hold strengthens your pulling muscles and prepares your body for dynamic pulling movements.

Using Household Items as Pull Up Alternatives

Sometimes, creativity and safety go hand in hand. There are ways to use items around your home to mimic pull ups without risking injury.

Using a Sturdy Tree Branch or Playground Equipment

If you have access to a safe outdoor area, look for a thick tree branch or playground monkey bars that can support your weight.

- Always check stability before attempting pull ups.
- Use the same grip and pulling technique as you would on a bar.

Doorway Pull Up Alternatives

While it's not advisable to attempt full pull ups on a regular door, you can use the doorway for modified exercises:

- Place your hands on the top of the doorway and perform "negative pull ups" by jumping up and slowly lowering yourself down.
- This helps build eccentric strength, which is crucial for pull up performance.

Progressions and Tips for Practicing Pull Ups Without a Bar

Building up to a pull up without a bar takes patience and consistency. Here are some helpful tips to keep your progress steady and safe.

Focus on Negative Pull Ups

Negative pull ups involve controlling the lowering phase of the movement. Even if you can't pull yourself up yet, lowering slowly builds strength.

- Use a chair or jump to get your chin above where a bar would be.
- Lower yourself down as slowly as possible.
- Repeat 3 to 5 times per set.

Train Your Core

A strong core stabilizes your body during pull ups.

- Incorporate planks, hollow body holds, and leg raises into your routine.
- Core strength improves your overall pulling efficiency.

Consistency is Key

Practicing these alternative exercises regularly will help you develop the muscle memory and strength needed for pull ups.

- Aim to train pull-up related movements 2-3 times per week.
- Gradually increase intensity and reps over time.

Why Practicing Pull Ups Without a Bar Can Be Beneficial

Not having access to a pull-up bar doesn't mean your upper body training has to stop. In fact, practicing pull ups without a bar can improve your functional strength and creativity in training.

- It encourages you to strengthen supporting muscles.
- Helps improve your grip and core strength.
- Develops body control and coordination.

Plus, training without specialized equipment makes fitness accessible anywhere, whether you're traveling, at home, or outdoors.

Approaching pull ups without a bar may feel challenging at first, but with the right exercises and mindset, you can build up the strength and technique to perform them confidently. Using household items, resistance bands, and bodyweight movements can keep your training effective and engaging. Remember,

the journey to mastering pull ups is as rewarding as the achievement itself.

Frequently Asked Questions

How can I practice pull-ups without access to a pull-up bar?

You can practice pull-ups without a bar by using alternatives like door frame pull-up bars, resistance bands, or performing inverted rows using a sturdy table.

Are there effective exercises to build pull-up strength without a bar?

Yes, exercises such as bodyweight rows under a table, resistance band pull-aparts, negative pull-ups using a chair, and lat pulldowns with bands can help build the necessary strength.

Can resistance bands replace pull-up bars for pull-up training?

Resistance bands can effectively mimic the pulling motion and help strengthen the muscles involved in pull-ups, especially when used for assisted pull-ups or lat pulldown movements.

How can I perform inverted rows at home to improve my pull-up ability?

Find a sturdy table, lie underneath it, grasp the edge with both hands, and pull your chest up towards the table. This exercise targets similar muscles used in pull-ups.

What are negative pull-ups and how can I do them without a bar?

Negative pull-ups involve slowly lowering yourself from the top position of a pull-up. Without a bar, you can use a sturdy door or doorway pull-up bar, or simulate the movement by jumping up to the top position using a chair and lowering yourself down slowly.

Is it helpful to use a sturdy door for pull-up practice?

Some people use sturdy doors for pull-up practice by gripping the top or sides; however, this can be unsafe and may damage the door, so it's better to

use proper equipment or alternatives like tables or resistance bands.

****Mastering Upper-Body Strength: How to Practice Pull Ups Without a Bar****

how to practice pull ups without a bar is a question increasingly asked by fitness enthusiasts who lack access to traditional pull-up equipment or want to enhance their upper-body strength in unconventional settings. Pull-ups are renowned for their effectiveness in building muscle, improving grip strength, and enhancing overall functional fitness. However, the reliance on a pull-up bar can limit practice opportunities. This article explores alternative methods and exercises to simulate pull-up training without the need for a bar, providing a thorough analysis of the benefits, challenges, and practical approaches to maintaining or advancing pull-up capability in diverse environments.

Understanding the Core Mechanics of Pull-Ups

Before delving into alternative practices, it is essential to understand what pull-ups fundamentally entail. Pull-ups primarily target the latissimus dorsi, biceps, rhomboids, and other upper back muscles. The movement requires pulling the body upward against gravity using arm strength and scapular engagement. Given this, any substitute training method must mimic the resistance and muscle engagement necessary for a pull-up.

The challenge of practicing pull-ups without a bar lies in replicating the vertical pulling motion and the load against gravity that stimulates muscle growth and endurance. This understanding shapes the various strategies fitness professionals recommend for those without access to conventional pull-up bars.

Alternative Techniques and Exercises for Pull-Up Training Without a Bar

1. Doorway Rows

One practical method to practice pull-up-related muscle engagement at home uses a sturdy door. Doorway rows involve gripping the edges of a strong, closed door and leaning back, pulling the body towards the door. This exercise targets many of the same muscles used in pull-ups, especially the upper back and biceps.

- **Execution:** Stand facing an open doorway, grab both sides at waist height, lean back with feet planted firmly, and pull your chest toward the door.
- **Benefits:** Builds pulling strength and grip endurance without needing specialized equipment.
- **Limitations:** Door strength and safety must be considered to avoid injury.

2. Towel or Sheet Rows

Towel rows mimic the pulling motion by using a towel or bedsheet looped around a sturdy object, such as a heavy table leg or a closed door. By pulling oneself up or toward the anchor point, similar muscle groups are activated.

- **Setup:** Anchor the towel securely, hold both ends, and lean back while pulling towards the anchor.
- **Advantages:** Portable and adaptable to various environments, enabling consistent training.
- **Considerations:** Proper anchoring is critical to prevent accidents.

3. Negative Pull-Ups (Eccentric Training)

Negative pull-ups focus on the lowering phase of the pull-up, which is equally important for muscle development. Without a bar, these can be simulated using elevated surfaces such as countertops or playground equipment, where one can jump or step up to the “top” position and slowly lower the body.

- **Effectiveness:** Eccentric training can increase strength and improve pull-up performance over time.
- **Adaptability:** Suitable for beginners unable to perform full pull-ups yet.
- **Safety:** Requires controlled movement and secure footing.

4. Resistance Band Workouts

Though resistance bands are often used in conjunction with bars, they can also simulate pull-up resistance without one. For instance, anchoring a band overhead and pulling it downwards activates similar muscle groups.

- **Versatility:** Bands come in various resistance levels, allowing progression.
- **Portability:** Easy to carry and set up anywhere.
- **Limitations:** Does not fully simulate bodyweight pull-ups but aids in strength development.

5. Bodyweight Rows Under a Sturdy Table

If a sturdy table is available, lying underneath and pulling the chest up to the table's edge replicates horizontal pulling, which is a foundational movement for vertical pulls.

- **Benefits:** Builds upper-body strength, especially in the back and arms.
- **Challenges:** Requires a table strong enough to support body weight.

Incorporating Complementary Exercises to Enhance Pull-Up Performance

While practicing pull-ups without a bar focuses on mimicking the pulling motion, complementary exercises can fortify muscles involved in pull-ups.

Push-Up Variations

Although push-ups primarily target the chest and triceps, variations like the archer push-up or pseudo planche push-up engage the shoulders and core, stabilizing muscles vital for pull-ups.

Planks and Core Strengthening

Core stability supports controlled pull-up movements. Planks, hollow holds, and leg raises improve core endurance, indirectly enhancing pull-up efficiency.

Dumbbell or Bodyweight Rows

If weights or household items are available, performing bent-over rows or single-arm rows strengthens the latissimus dorsi and rhomboid muscles, directly impacting pull-up strength.

Pros and Cons of Practicing Pull-Ups Without a Bar

- **Pros:**

- Accessibility: No need for specialized equipment or gym membership.
- Flexibility: Can be performed in various locations, including home or outdoors.
- Cost-effective: Utilizes household items or minimal gear.

- **Cons:**

- Limited range of motion and resistance compared to actual pull-ups.
- Safety concerns with makeshift equipment or improper anchoring.
- Potentially slower progress without the exact stimulus of a pull-up bar.

Maximizing Effectiveness: Tips for Practicing

Pull-Ups Without a Bar

To optimize training without a bar, consistency and progressive overload remain crucial. Gradually increasing repetitions, sets, or resistance ensures muscles adapt and grow stronger. Combining various alternative exercises can simulate the full range of pull-up motion, promoting balanced muscle development.

Safety should never be compromised. Testing the sturdiness of doors, tables, or anchor points prior to exercise can prevent injuries. Additionally, maintaining proper form, even when using unconventional methods, is essential to avoid strain.

Final Thoughts on Alternatives to Bar-Based Pull-Up Training

Exploring how to practice pull ups without a bar reveals a spectrum of versatile, creative approaches that maintain or enhance pull-up strength. Although no method perfectly replicates the experience of a traditional pull-up, combining exercises like doorway rows, towel pulls, negative pull-ups, and resistance band workouts offers a comprehensive strategy for upper-body development. With deliberate practice and attention to safety, individuals can continue to progress toward their fitness goals, undeterred by the absence of a pull-up bar.

How to get in a COMPLETE upper body workout - with just the pull-up alone (and if you do it right, it won't take you more than 15 minutes - and you'll be SPANKED at the end of it). RAW, ferocious animal like strength you cannot get from other movements. You'll be a NEW MAN (or woman) after a few days of doing what's specified in this course. A TRULY ripped and functionally (MEGA) strong midsection. You'll have slabs of GRANITE for abs, and your obliques will turn into twin corded pylons of steel-like power, endurance, flexibility and feel! Hidden secrets and KEYS to increasing the intensity and effectiveness of the pull-up that NO-ONE else is telling you - - including - - hold on to your hats - - how to change LEG positioning to completely change up the effect of the exercise! THIS ONE tip alone is worth the price of admission, my friend. That coveted X shape will be YOURS. Oh yes, it WILL! A grip like it was made of rebar, and fingers of IRON. Fingers like CLAWS, more like and hands like PLIERS. If folks were scared to shake your hand before - well, they'll definitely SHY away in FORCE now (hint - Read related testimonials/comments on this on the testimonials/grip page, hehe). Corded forearms with veins running up and down them pulsating with LIFE FORCE, ENERGY, VITALITY and STRENGTH! Massive, well built shoulders that are broader than a BARN DOOR, and are every bit as strong as they look! A MAMMOTH, BRAWNY upper back that looks like it belongs to an old timer. Traps extending all the way up to your ears that look like they belong on a silverback gorilla! A packed chest that literally RIPPLES - nay, STREAMS with muscle every time it moves! SUPER CARDIO, and how to get it with pull-ups.

how to practice pull ups without a bar: *PULL-UPS - from DUD to STUD - to SUPER STUD - WITHIN WEEKS!* Rahul Mookerjee, 2020-03-20 Dear friend and FELLOW pull-up ENTHUSIAST, If there EVER was an exercise that lends itself to unending awe, speculation - and AMAZEMENT (at being performed RIGHT) - it is the mighty PULL-UP. If there EVER was an exercise that builds strength in your upper body to near LEGENDARY King Kong like levels - it is the ALMIGHTY pull-up. If there EVER, EVER was ONE exercise that you would want to MASTER - in all it's forms, shapes and guises - it is this - the PULL-UP! If you want gorilla like traps - and FOREARMS - and a mighty, rugged, MUSCULAR chest - and lat spread that looks like you'd need to turn around sideways to get into the average door - you need to get good - VERY good indeed - at ONE exercise - the PULL-UP! If there EVER was an exercise that built outrageous abdominal STRENGTH - insane twelve pack like definition - and got rid of fat SUPER QUICK - all over your upper body - it is well - I think you've guessed it. If there ever was, ... ah, but while I could write several tomes on the pull-up and still NOT be done, I think you get the drift. Pull-ups, my friend are not only the most complete ADVANCED upper body exercise there is - but they are also one of the misunderstood, badly performed (kippling - ugh!) and awe inspiring exercises out there. Every man wants to be able to bang out at least 10

pull-ups EFFORTLESSLY in letter perfect form, but lets face it. Most modern day men (I use quotes for a damned good reason) would do well to hang on to the chinning bar for any length of time - let alone with the right GRIP - and as for performing a pull-up - or half pull-up - or quarter? Well, my friend - the VAST majority of modern day men (again, I use quotes for a reason) would be unable to even muster up the strength to pull their saggy, bloated asses up even an inch or two (without straining a tricep or two - or more). And most modern day men that TRY to do pull-ups (as opposed to actually DO even half a REAL pull-up) remain sore for DAYS after their first attempt. Sounds familiar, doesn't it? Yeah. I thought so....! Wouldnt YOU want to be lean and mean - a fighting MACHINE - like the soliders in the Marines and elite forces are around the world? Would you NOT want the ability to take punches to your midsection from PROFESSIONAL hitters - - and have them bounce off ya like they were nothing. As a friend of mine once told me, I'd be wasting my time by hitting there! Would you not want the twelve pack - and corrugated CORE - and extreme upper body ape like strength and definition that most men can only DREAM of? Of course you would. WHAT THIS TUTORIAL CONTAINS - The path breaking Pull-ups from DUD to STUD - - within a matter of WEEKS - - a course that truly HAS brought folks from zero to hero level at pull-ups - - in RECORD TIME. The torch bearing ADVANCED COURSE ON pull-ups - - Pull-ups from STUD to SUPER STUD - - that has turned previous fit folks into FREAKS of nature, my friend - with ape like upper body strength and black smith like IRONMONGER stylegrip that the average man can only dream of - and MARVEL at. And as if that wasn't enough, there is also a FAQ section on pull-ups - - which addresses ALL the most commonly asked questions that folks have on pull-ups. I guarantee you - you ain't gonna find a more complete compilation on FAQ's (in terms of pull-ups) ANYWHERE ELSE. In fact this alone probably justifies more than at least half the price of the course, if I were to be very frank and brutally honest with ya! Grab it now, my friend - it truly IS a one of kind tutorial out there - - and combined with the FAQ section, it truly IS the - BEST - I repeat - VERY BEST course out there on pull-ups - I challenge you to prove me otherwise! To your success, Rahul Mookerjee

Be taken by the SCRUFF of the neck and literally forced, left with no choice but to get better

at the exercise or just plain ole quit (in which case we don't want you wanking around here no mo) ... its either SURVIVE AND THRIVE, or DIE (metamorphically). Thats the spirit this course will arouse in you, like "no man ever has before" and you cannot go wrong with that sorta spirit! ... tread paths on the pull-up NO man has ever trodden before - literally - some of these tips are literally worth their weight in gold my friend, you've never seen them anywhere else before, you never ever will. ... lose fat and gain muscle so quickly that even you won't believe it's the same person looking back at you in the mirror a few weeks later. You'll be fitting into clothes you wore as a teen - no kidding. get to "hallowed" numbers in the pull-up that even my other world class books on pull-ups did not address. Por ejempelo, 50 pull-ups per set - or even 100? Blink all you like, but it's possible, very POSSIBLE, and in this book you'll learn how! ... build a grip of steel like never before. My other books do a fair job of this as well (the info in them) but THIS info takes that, pounds it into pulp, multiplies it by 10 or more and then re-emerges as lumps of muscle on those forearms. Don't believe me? Ask Sly Stallone whose own forearms are the stuff of legend, and whose reported to have been on the same routines as what this book advocates. ... will start cranking out one arm pull-ups effortlessly, willy nilly, truly the holy grail of strength and conditioning eh. ... will take your core gains to the next level - so much so that punches will literally "rebound" off your midsection while you do very little other than stay "normal". will turn into the closest thing to a human ape - or tiger in terms of that KILLER instinct which pull-ups build like few other movements can. ... will turn into a mountain of muscle overall, and a bundle of sinew and tendons that will be every bit as strong, tough and rugged as they LOOK! ... will be the STAR, the attraction at the gym, playground, or just at home as people look at you cranking out pull-ups effortlessly that they wish they could do, and in some cases cannot even after years of trying. And so much more, my friend. So much more!! I could write a tome here, and it would not be enough - so in short - take what the last three courses taught you, and this is literally the ICING on that cake which makes everything so special and worth it. And we're just getting started! Friend, this course is MORE than worth it's weight in gold, silver and platinum, and with the plethora of, the treasure trove of SECRETS - just WAITING TO BE UNVEILED by you - the pithy amount of LESS than \$50 I am charging for it is a STEAL. This LITERALLY IS one of those courses every serious, or even halfway serious fitness trainee simply must have sitting on their bookshelf!! Get it NOW! Best, Rahul Mookerjee

how to practice pull ups without a bar: Conditioning for Climbers Eric Horst, 2008-05-01
The only conditioning book a rock climber needs! Rock climbing is one of the most physically challenging sports, testing strength, endurance, flexibility, and stamina. Good climbers have to build and maintain each of these assets. This is the first-ever book to provide climbers of all ages and experience with the knowledge and tools to design and follow a comprehensive, personalized exercise program. Part One covers the basics of physical conditioning and goal-setting. Part Two takes readers through warm-up and flexibility routines, entry-level strength training, weight loss tips, and fifteen core-conditioning exercises. Part Three details climbing-specific conditioning, with twenty exercises to target specific muscles of the fingers, arms and upper torso to develop power and endurance. An entire chapter focuses on the antagonist muscle groups that help provide balance and stability, and prevent muscle injury. This section also has a chapter devoted to stamina conditioning, increasing the climber's endurance at high altitudes. Part Four shows how to put together a customized training program to suit the climber's needs. The book includes workout sheets for Beginner, Intermediate, and Advanced skill levels, tips for children and those over age fifty, secrets of good nutrition and an insider's take on avoiding injuries. Eric Hörst is a performance coach who has helped thousands of climbers. His published works include Learning to Climb Indoors, Training for Climbing, and How to Climb 5.12. He lives in Lancaster, Pennsylvania.

how to practice pull ups without a bar: FITNESS PIONEER - Volume TWO Rahul Mookerjee, 2021-01-03 Dear Reader, Well, well, well. I finally did it! While wearing my favorite red jacket, and on a COLD, blustery wintry day right smack in the middle of “covid shovid” season as it were. It's 2021 at the time of writing this. We had tons of people tell us to “forget” 2020 and this was being said even WHEN 2020 was going on. As I heard these people prattle on, I RAILED against the nonsense of a) succumbing to panic and b) thinking it will just go away (the panic, not the disease itself). Now, granted the plague that China knowingly and willingly spread everywhere spreads in a manner not seen before. And it's more lethal than the flu for those that do get it. But it usually only afflicts those with underlying diseases or in otherwise poor health, and even amongst those people, it is only terminal for ONE out of 10. You have probably got more chances of being run over by a school bus or something the minute you step out than get this damned thing. And yet, the panic spreads. And continues to. My advice in 2020 was the same as it is NOW. Do NOT succumb to panic. As U.S. President Donald Trump famously once said. Precautions, NOT panic! And he was RIGHT. I'm a huge Trump fan, but while I don't agree with him on everything (most notably the shennanigans at not acknowledging the election loss etc) - I DO AGREE with everything he says about China. I say it myself! And he's spot on about this damned plague they sent over to the ROW. They predicted the panic it would cause. And it did! But now, my friend, what you gonna do? They done spread it and bailed. (Ever wonder why the Chinese mysteriously, despite having the worlds largest population (though India is catching up) had less than 1% of the worlds COVID cases? One reason was underreporting and the Communist government in China blocking access to true numbers etc, but the other reason is they planned for this, PREPARED for it in advanced, and then, and only THEN unleashed this on the rest of the world). There is more, but that, my friend, like it or not is the gist of it. I do NOT, I repeat NOT get into politics. I dislike it to an extreme, but 2020 and the plague they spread was the straw that broke this here “misfit cranky camel's” BACK. Anyway ... we're past that now. Now, we as the rest of the world have to, whether we like it or not DEAL with it. And buying into the panic and going into lockdown shockdown that kills economies globally and far more people as a result is NOT the way to go about it. The way to do it is a) don't buy into the panic. And b) most importantly, recognize that the importance of HEALTH And fitness can never be overemphasized. When I say health and fitness, I mean from the inside out. When I say TRUE strength, I mean not just the bloated muscles on the outside that the boobybuilders at the “Jim Shim” preen and pump day and night and proudly boast about how “tight my muscles are” while not being able to privately raise their arms to put on their shirts. Or, so pumped full of steroids they are that they have multiple heart attacks at an age they should be in their prime, let alone heart attacks and what not. Neither am I talking chicken legged or pelican legged monsters benching Manhattan but not able to yank their own cords - have a miserably strong grip - and have little or no leg strength and consequently strength and stamina. Real health and fitness DOES not come from “sitting in the gym and yanking away on machines and doing set after set and posing and preening

after each set". IT does NOT come from retarded "pile on to the bar as much as possible" and get injured weightlifting dum shum contests. REAL strength comes from REAL fitness. So does real HEALTH. You work the legs and BACK and GRIP hard. And you do NOT neglect the CORE. And, the rest will take care of itself. I could write 100 pages or more about all this, but thats why I put out this Volume . . . Many more to come, but suffice to say that "mainstream" will get you the opposite of what you need i.e. REAL man - or woman - fitness. Fitness as Nature intened us to be. And these irreverent, pioneering, bucaneeing tips have come from yours truly truly spending time in the trenches and imparting these gems of wisdom to you Sometimes, I look at the price of the book and think of increasing it, because some things are just priceless my friend. EACH of these tips by itself is worth a "goldmine of information" as it were. What you DO with it is up to you, but any serious trainee should have these for reading by his bedside - on the toilet (if thats your thang, hehe) - or for motivation (either life or fitness wise) - or to prepare for any sort of SERIOUS TRAINING! And these tips by themselves will get YOU in the best damned shape of your life, bro. Trust me on this (or sis, hehe). Enough for now. Let's dive into it. But, first, a bit of a story from a "boobybuilder-cum-convert" I met years ago ... Former BOOBY-builder tells all ... Former "roid crazed" bodybuilder tells it like it is Those that know me well know that swimming is one of my favorite pastimes. In addition to it being a a great, great overall body exercise, swimming is also fun and enjoyable to do. It's good for overweight people, it's good for toddlers, and it's great for the average person looking to get in some exercise. Cannot say enough good things about swimming. Anyway, swimming reminds me of something I thought I should share with you. There was a guy at the pool I swim at who used to participate in bodybuilding competitions. And when I say bodybuilding, I mean it - he looked every bit the part. Gigantic muscles popping out in all directions, an unnaturally slim waist, the flared lats; you get the photo. Now to his credit, this guy was learning how to swim - one of the best things you can do - and being that I used to hare up and down the pool at a pretty decent clip completing my laps, he'd come up to me at times and ask me for pointers on how to improve his technique, breathing style, etc etc. Now, while I'm certainly no expert on swimming, I helped him out the best I could with what I knew and some tips that I thought would improve his swimming. And while doing so, we started to chat, and got around to talking about exercise routines. And this brought up the topic of bodybuilding, and what this guy did full time for many years before taking to the pool. And it aint pretty - think 8 hours of pumping iron (not kidding you - 8 full hours pumping iron daily), making sure he got enough food in him, and of course, the anabolic steroids which is pretty much a must - do if your anyone of any repute in the bodybuilding field. "Well, at least you must have built up a considerable amount of strength with all that weight training", I told him. And his response was this: "Yes, to a degree - but whats the point? My muscles hurt when I swim with any regularity, and I've already had TWO heart attacks. My wife fears the third one could be the last, so I quit professional bodybuilding at that point". So, how old was this guy? The answer may shock you - he was 30. That's right - THIRTY years of age, bloated muscles and all - and TWO heart attacks already! Now, I bring this up not to point fingers at this guy and give him a lecture on how bodybuilding is BAD for him - he's done that better than I ever could by changing what he does, and hats off to him for that. But, his routine is about par for most modern day bodybuilder, and that sort of routine is best AVOIDED. The trouble is though, that all those fake muscles get folks thinking that they're the "real deal" - and they start to ape the bodybuilder routines - and thats when the problems start. Think about it - doing all sorts of exercises for 8 hours a day daily - and eating next to nothing except protein shakes and eggs - and bloated muscles that don't work worth a darn in the real world. Is it worth it? I can just begin to imagine how that guy would do if I asked him to rep out 5 pull-ups in good form. And as for HANDSTAND pushups - forget it - the dude would likely collapse in a heap if I even ASKED him to get into a handstand, much less execute, or TRY to execute a handstand pushup. (Those are two of the best damned exercises you can do, by the way!) Two heart attacks before the age of 30 and virtually no stamina/endurance left. Is it worth it? Only you can answer those questions for yourself, but I know what my answer is. And lest you think this type of thing is limited to bodybuilders, think again."Professional" wrestling (not

the real deal) is rife with cases of folks dying of drug overdoses, and movie stars routinely use drugs to maintain their "perfect" bodies. The question is though, what are YOU going to do, my friend? I mentioned pretty much everything the dude said to me in real life in the convo presented above - well, almost everything. While I did mention him telling me about his "ticker" issues at the "ripe old age" of 30, what I haven't mentioned to you is the other comments he made to me - "man to man" as it were, and in the spirit of keeping this page "PG" rated, all I'm gonna say is that the ticker wasn't the only thing not working correctly. He was having "pecker" issues as well, and as anyone that's used steroids for a while will readily attest, while they may make your muscles bloat up unnaturally, you'll experience "substantial size loss" in your "man bits" if you get my drift - - not to mention experience other "associated" problems. So much for the hours he spent in the gym building that functionally useless massive upper body ... Show muscles, yes - beach boy muscles - yes - but what price the ticker, my friend? What price the pe ... ah, but I think you get my drift? Question begets then - - what course of action are YOU going to choose now? Are you going to continue down the "bozo shozo" road of doing what the gym-shym tells you, and continue to preen and pump and pose and tone and bone and fone for hours with the bros (ugh that combo) and get NOWHERE (except whats mentioned above), or are you going to BUCKLE your ASS down, and get down to SERIOUS training, done the way yours truly does and advocates? Are you going to choose REAL HEALTH AND FITNESS over "fad shad" at the gym? Are you going to RECOGNIZE the fact that some of the fittest and baddest men on the planet do NOT lift weights or go to the GYM? Are you going to UNDERSTAND That your own bodyweight is all you need to give you a HECK of a workout, and them some? All these questions, and then some are up to YOU my friend. Only YOU can choose the path of "real man" and FITNESS - - and lifelong health as opposed to the B.S. If I were your brother though, I know what choice I'd tell you to make. On that note, lets just get straight into the BENEFITS now, and we'll then get to the TIPS. Once again, thanks for your purchase. You've made the right choice! BENEFITS you can expect from understanding and then religiously FOLLOWING these tips! First off, and most importantly, it's not enough to simply READ. You have to DO the thing, bro, to truly understand. Just like you have to walk a mile in a man's shoes to truly understand what is going on with HIM or HER, the same thing with fitness. You cannot, I repeat, cannot be a lardassian "armchair workout fanatic", and you'll learn why and more on this in THIS manual. What REAL fitness entails as opposed to the preening and pumping in the gym shym. You'll even learn about a LIST of exercises every real man (or woman) should be able to do, but precious few CAN. The two very best - and very WORST exercises you can do for your upper body that will build a ton of muscle at record speeds, and BURN lard off at record speeds as well (quicker than you can put it ON). How to literally EAT more - and WEIGH LESS - with PROOF! How to SKYROCKET past previous bests on pull-ups! How to get a core as HARD as a wall - quite literally - a core so ROCK SOLID that your elbows will BOUNCE off it. (yours, or others). And no, it ain't just buying Corrugated Core, although those exercises in that course will sure as heck help! How to build that SEXY chest that women love, and the V taper to your back we've covered SO often here. And believe me, that alone might just be worth it for YOU! Why you can TAKE a horse to water - but cannot make it drink - and more to the point, why it's pointless to try. Replace horse with idiots that think "bodyweight exercises don't build strength" and/or "You need the Jim Shim" for STRENGTH training or the bench press/lat pulldown devotees, or the ape like nutters yanking each other's cords and yakking away nineteen to the dozen while supposedly "working out" at the Jim Shim ... Why you WILL get trolled initially when you do something that goes against the grain - and say it like it is - and why you should WELCOME that. And how to make these bozos literally cry TEARS of frustration while you laugh all the way to the bank. I know I said this was a fitness book, but given the Bozo Schofield saga, I thought I'd put this in here, and giv eyou a few marketing tips too. But hey, these tips are fitness related too! You'll see what I mean. Why the FACT is that most people claiming to be "big and can't do pull-ups" are actually FAT. Big time. Yes. I said it. Fat, with humungous gigantic bellies that grow by the day while they yank away at the gym shim pretending to build REAL strength while secretly admiring those that can pump out pull-ups for reps, smooth and easy as

BUTTER ... (And let's face it, it's TRUE). (And I've got PROOF). (Plenty of it) Why said bozos above would be better served by doing the thing as opposed to being "jealous shellus" and making EXCUSES, and hiding behind NON existent "facts" (that again, don't exist). Really, dude. You want to do pull-ups. Just freaking admit it. Now lose the weight ... and GET CRANKING! And if you know anyone like that above, YES, they CAN do bodyweight exercises - even tougher ones. Size is NOT a problem. FAT is! But of course, you gotta get past the "bozo defenses" and crack their minds open FIRST, and these tips will do just that. Why QUICK and dirty workouts that BLOW your heart's valves wide open are far, far better than "marathon long workouts". What you can learn from an older lady in India - a vegetable seller for one - in terms of FITNESS And on that note - what Chinese ladies and massueses can teach YOU about FITNESS ... Believe me, those above two tips ALONE are so unusual and WORTH it that you'll have gotten value - several times over and above what you've PAID for this course. Why Madam Jassy and her pink dumbbells ain't the ticket to fitness I was taught as a kid ... The single MOST important thing to learn when doing pull-ups or any exercise. Hint - no, it aint necessarily physical either! Well, my friend I could keep writing until 2022, and still not be done with the benefits. So I'll sign off on those here - - and lets drive - DIVE - right INTO THE tips! (It "came out" as drive, and upon introspection for a nanosecond, I bet thats the better way). (The subconscious never ever lies! Yet something else you'll learn about below) ... Grab this now. Truly WELL worth it's weight in GOLD! There has never EVER been a compilation of tips like this in the HISTORY of fitness. Yes, my friend. I truly am a PIONEER in certain regards and am NOT shy to blow a bugle about it from the ROOFTOPS either. Get this NOW, my friend - and you TOO will be called a pioneer - a TRAIL BLAZER - and MORE! YES!
